

111 NAVY with COCA-COLA

# FIRST LET'S MAKE THINGS THAT LAST.

The Emeco 1006 Navy Chair was first commissioned in the 1940s by the U.S. Navy for use on warships – the contract even specified that it had to be able to withstand torpedo blasts. Today our chairs are still made in the U.S.A., of 80% recycled aluminum, and are made by hand, by Emeco craftsmen using the original 77 step process. The world's best architects and designers collaborate with us to design chairs that are built and guaranteed to last a lifetime.

As we apply what we've practiced in the past, we are looking toward the future. We are on a mission to make a positive impact on the environment. Our goals are to use waste material in our products, use as little energy as possible in our manufacturing, generate a minimum of waste in the process, and build strong, durable, beautiful chairs that last through generations. We've been on the same mission since 1944 and we will continue to search for new ways to recover and utilize discarded materials and make products that last.

# NEW MATERIAL FROM EMECO.

We get the most out of the material we use. For years, that material was aluminum. We developed a way to work with it to make products of extraordinary strength, durability and beauty.

In 2006 Coca-Cola approached Emeco with a problem: Billions of plastic bottles were being sent to the landfill every year. We saw an opportunity. By up-cycling, we transformed the waste into a new material. It took years to develop the new material we now use for the 111 Navy Chair. It's strong, durable, and it has a deep beauty that people love when they touch it. And it's made from recycled plastic bottles. In fact, we called it the 111 Navy Chair because every chair we make takes 111 plastic bottles out of the landfill.

**GOOD  
OLD-FASHIONED  
AMERICAN  
INNOVATION.**

"I was excited about the impact of using the rPET from millions of bottles that are discarded each year. With the 111 Navy Chair, we've turned something many people throw away into something our customers will value and keep for a long, long time," said Gregg Buchbinder, CEO at Emeco.

**111 NAVY CHAIR by EMECO**

Coca-Cola and Emeco collaborated to solve an environmental problem by upcycling consumer waste into a sustainable, timeless, classic chair. Made of 111 recycled PET plastic bottles, the 111 Navy Chair is a story of innovation.

The image shows a close-up of the backrest of a chair. The backrest is made of a dark, possibly black, material with a curved, ergonomic shape. It features four vertical slats at the top. A white, textured fabric insert is positioned in the lower part of the backrest, providing additional support. The brand name 'emeco' is printed in a simple, lowercase font on the dark frame at the bottom center.
